

PROJECT PRESENTATION

Workforce & Sales Intelligence Dashboard

Smart Decisions using Pivot Tables + XLOOKUP

An Excel-based analysis of retail transactions, sales performance,
order cancellations, and fulfillment trends

Prepared as a portfolio project

Project Overview

Turning raw retail transaction data into a decision-support dashboard

- Scenario: reporting analyst supporting a retail sales team.
- Dataset: 100 sales transactions across regions, products, and customer profiles.
- Management need: understand product and regional performance, customer patterns, and fulfillment efficiency.
- Deliverable: a clean, interactive Excel dashboard using lookup logic, Pivot summaries, filters, and KPIs.

Aim & Objectives

What the project was designed to achieve

AIM

Transform raw sales data into clear, usable insights that support business decisions.

OBJECTIVES

- Clean and standardize the dataset.
- Structure dates, regions, and product categories.
- Use XLOOKUP to connect customer details.
- Summarize revenue, fulfillment, and cancellations with Pivot Tables.
- Present results with dashboard visuals, KPIs, and filters.

Technology & Methodology

Tools used and the analysis workflow

TOOLS USED

- Microsoft Excel
- XLOOKUP
- Pivot Tables and Pivot Charts
- KPI cards and slicers
- Data cleaning and formatting

WORKFLOW

- 01 Inspect and clean raw records
- 02 Standardize fields and data types
- 03 Enrich records using XLOOKUP
- 04 Build Pivot-based summaries
- 05 Create dashboard visuals and filters

Key Findings

Highlights from the 100-transaction analysis

₹15,209

Highest revenue category:
Electronics

40%

Cancellation rate recorded in
the North region

11 orders

Delivered within 2 days (11%
of the dataset)

These figures provide starting points for deeper review of category performance, regional cancellation causes, and delivery speed.

Verify the figures against the final workbook before presenting.

Recommendations & Project Outcome

How the analysis can support action

- Review cancellation reasons and order handling in the North region.
- Track delivery timelines regularly and investigate avoidable delays.
- Use category-level revenue comparisons to guide sales planning.
- Keep the dashboard refreshable so management can explore updated data.
- Outcome: practical experience in data cleaning, Excel lookup functions, Pivot analysis, visualization, and communicating business insights.

Thank You
